Emergency Management Assistance Compact (EMAC) resources in California

The Emergency Management Assistance Compact (EMAC) is the Nation's mutual-aid system that provides a formal structure where all 50 States and 4 Territories have the ability to share resources across State boundaries. The Cal OES EMAC Coordinator in coordination with the Cal OES Fire Branch are working together to request and coordinate needed resources via the EMAC Compact.

- The following states have EMAC resources in California:
 - Idaho: 5 engines
 - Montana: 5 engines
 - New Mexico: 5 engines
 - Washington: 15 engines
 - Utah: 10 engines

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

***** Monsoon Thunderstorms Possible Friday into the Weekend *****

For the next several days low pressure will be west of the Pacific NW and northern CA and strong high pressure will be centered over the Desert SW. A general SW flow will continue over the region through Thursday as the Desert SW high strengthens and builds north. W-NW winds will increase again in the coastal range after noon and spill through the gaps and passes into the western Sacramento Valley by late afternoon. Peak gusts will be 15-25 mph. The winds will diminish in the coastal range around sunset and in the western Sacramento Valley late in the evening. Minimum Relative Humidity (RH) values will be 7-17% in the driest interior areas. These conditions will be repeated each day through Thursday while a warming trend takes place. By Wednesday or Thursday temperatures will be 5-8 degrees above normal. There is a chance that monsoon moisture could move northward and produce thunderstorms Friday into the weekend. There is still a lot of uncertainty as to whether the moisture will move into the region and if it does which areas will be affected. This situation will be watched very closely to determine whether it will be a high risk event.

SOUTHERN CALIFORNIA

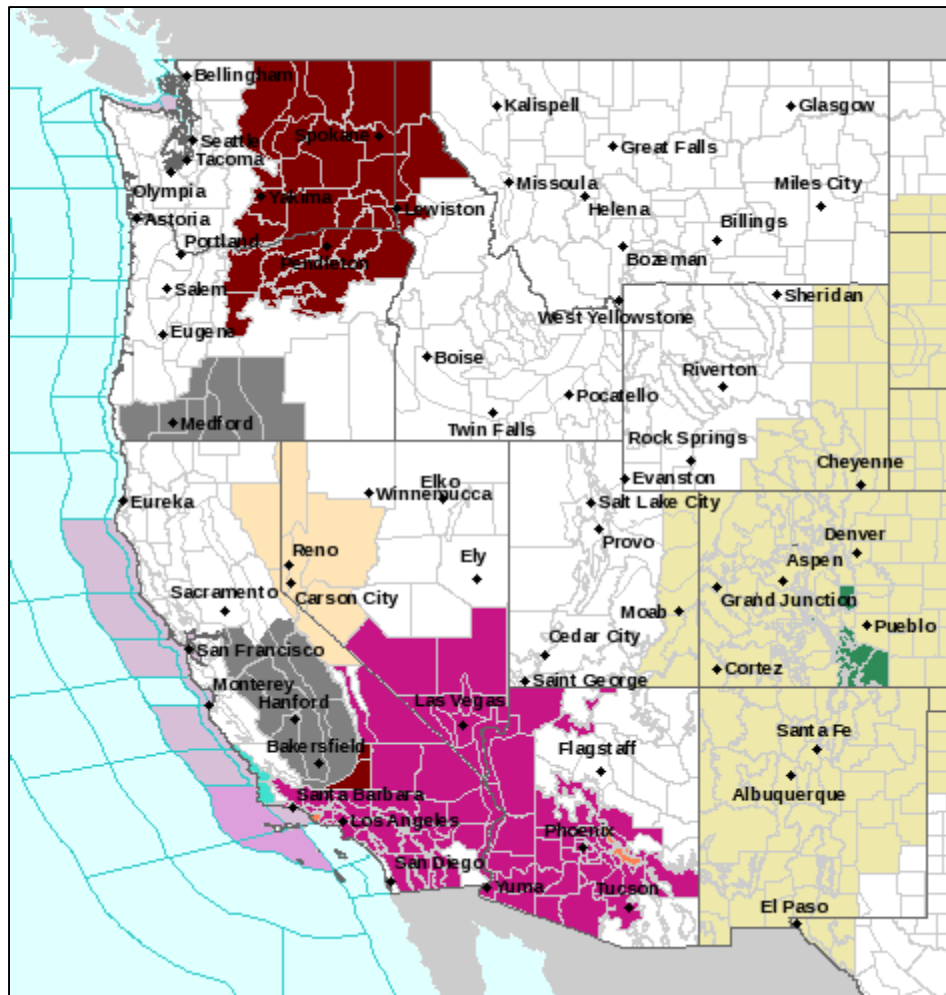

*****Hot and very dry through Wednesday*****

*****Gusty northerly winds over Santa Barbara County and the Grapevine tonight*****

Strong high pressure currently centered over the Arizona/New Mexico Border will bring hot and very dry conditions to most of the region through Wednesday. Maximum temperatures will be in the mid 80s to mid 90s across the mountains and upper 90s to 110 in the valleys. Minimum humidity will be in the single digits and teens and there will be poor humidity recovery at night away from the coast. Northerly winds of 15 to 25 mph with gusts to 40 mph will surface across Santa Barbara County and the Grapevine tonight, otherwise winds will be light. The high pressure will move northward into the Great Basin allowing isolated wet afternoon thunderstorms to form over the mountains and deserts of Southern California east of the Cajon Pass Wednesday. A disturbance in the flow will bring scattered thunderstorms to the mountains and deserts including the Sierra late this week. Some of the thunderstorm activity may also move into the coastal and valley locations of Southern California late this week. The thunderstorm activity will lessen this weekend and become focused over Central California from the Sierra Crest eastward and over the mountains and deserts of Southern California east of I-15 as the high pressure weakens and gets pushed to the south. A cooling trend will take place Thursday through this weekend, with near normal temperatures expected by this weekend. Westerly afternoon and evening winds of 15 to 25 mph will surface across the desert passes this weekend.
